DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 23-45, drawn to methods for the identification, isolation or separation of identical nucleic acid fragments from a mixture of at least two nucleic acid populations comprising an amplification reaction, classified in class 435, subclass 91.1, for example.
 - II. Claims 46-51, drawn to kits comprising a double stranded adaptor molecule and a specific, labeled primer, classified in class 536, subclass 24.33, for example.
 - III. Claim 52, drawn to a method of separating identical DNA fragments from complex mixtures of at least two nucleic acid populations comprising only a hybridization and separation step, classified in class 536, subclass 23.1, for example.
 - IV. Claim 53, drawn to drawn to a method for identifying DNA regions that are relevant to a pathological condition or a particular trait, classified in class 435, subclass 6, for example.
2. The inventions are distinct, each from the other because of the following reasons:

A) Inventions I, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions are directed to methods having different method steps, starting materials, and goals.

Art Unit: 1637

B) Inventions II and (I, III and IV) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not required one for the other in that the kit of Group II are not required for the methods of Groups I, III and IV. Furthermore, the kit of Group II can be used in a materially different method than the methods of Groups I, III and IV, such as in a nested PCR reaction, assays conducting on an array or methods of disease detection.

3. Because these inventions are distinct for the reasons given above and have acquired a different status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I-IV require different searches that are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
